

Increase in 2021 RSV, HPIV cases

National and statewide circulation of respiratory viruses other than influenza and SARS-CoV-2

(the virus that causes COVID-19) are above normal transmission levels, particularly human parainfluenza virus 3 (HPIV-3) and respiratory syncytial virus (RSV). During the recent summer

months in Colorado, there has been an increase in reported croup outbreaks, HPIV-3 test positivity, and hospitalized RSV cases.
