

COVID-19 hospitalizations

Colorado continues to see large numbers of new COVID-19 infections and hospitalizations, and UCHealth hospitals are now caring for about 220 patients with confirmed or suspected COVID-19. The vast majority of these patients are not vaccinated, however, breakthrough infections among people who were vaccinated are being seen in some of our hospitalizations. Third doses of the vaccine will help protect immunocompromised patients, while booster shots will protect health care workers and seniors.

We are closely watching the census levels of our hospitals and have been rescheduling some non-emergent, non-urgent surgeries and procedures to help improve our capacity and reduce the strain on our staff members.
